

Everyone Knows That Patients Prefer To Be At Home

Patient care is at the center of what Auburn VNA Health Network does. It is critical to provide a full range of services because each case is unique. That is why we have invested in the newest technology -- Home Telehealth.

Telehealth care enables us to monitor, evaluate, and educate acutely and chronically ill patients between regularly scheduled nurse visits. Clinical information is monitored every day while the patient stays where they belong, at home.

This technology is ideal for monitoring patients with CHF, COPD, diabetes or other complex diagnoses.

HOME TELEHEALTH

IMPROVE PATIENT CARE OUTCOMES

Because our nurses receive daily information on the patient, we are able to provide timely intervention when needed.

- ◆ Early Intervention Capabilities
 - ◆ Reduced ER Visits
 - ◆ Reduced Hospital Re-admissions
 - ◆ Enhanced Disease Management
 - ◆ Improved Quality of Life
 - ◆ Enhanced Patient Compliance
 - ◆ Reduce the Frequency of Office Visits and Telephone Calls
 - ◆ Increase Communications and Peace of Mind
 - ◆ Improved Patient Outcomes
-

IMPROVED PATIENT SATISFACTION

Patients will receive a mix of in-person and telehealth visits. Not all patients are candidates, but those who are given a telehealth monitor gain more confidence and demonstrate improved compliance.

- ◆ Patients feel that telehealth helped them to better understand their chronic disease
- ◆ Simple-to-use for most patients
- ◆ Shown to improve patient satisfaction with home care
